

Distinctive window awnings to beautify your home

These popular awnings have a soft slope that will add the appearance of spaciousness to your home and property as a permanent decorative addition.

Awnings . . . an energy saving bonus

Did you know that properly placed aluminum awnings can reduce the summer temperature in a room by as much as 8 to 15 degrees? Tests by both, The National Bureau of Standards and The American Society of Heating, Refrigeration, and Air Conditioning Engineers have clearly demonstrated the value of window awnings as an easily available energy saving resource for most homeowners.

One test by The Bureau of Standards demonstrated how awnings on two windows of a four hundred square foot room cut the air conditioning requirements from a large one horsepower 220 volt unit to a 3/4 horsepower 110 volt unit; with resultant savings on the purchase price of the air conditioner, the wiring, and overall operating costs. In addition, the same researchers found that aluminum awnings provide an energy saving bonus in winter time as well - by cutting drafts and thereby reducing fuel usage!

Doorway awnings

An attractive, protective door canopy will be a welcome addition to your home. Your porch or entranceway will be protected from rain, sleet and snow; your guests will have shelter as they enter and leave. Door canopies help to eliminate messy floors and tracked-up carpets by keeping rain and slush from the entrance. Your door and woodwork will be fully protected from the weather.

Custom designs to suit any style window or entranceway . . .
